In the early morning one sees the ground strewn with the flowers and the Santals carefully gather the mohua flowers in the baskets. The Pipal, with its gnarled roots and spreading branches serves as the resting place and meeting ground of the Santals, and the Palas with its yellowish blaze of colour dazzles the country-side in the wintry months of the year.[1]

139 Large tracts of forests are frequently found
136 within the area, the abode of ferocious tigers, elephants, *sambar* deer, leopards, hyaenas, deer and wild-pigs. The marshes abound in wild-ducks, pigeons, geese, snipe and partridge.

132 In the summer months, the heat is intense and rises in places upto 120° degrees and dust-storms and "loo" (*heat-wave*) are the rules rather than the exception. The rain-fall compared to Bengal is very low but it is cold during the winter, the minimum record being on an average 40° degrees.

133 The area in Bengal that falls within our scope
137 is a belt of irregular thickness and furnishes a gradual change from the plateau to the plains of Bengal in an undulation, interspersed with forest growths at places. Here, more specially in Bankura, small isolated hillocks and short ranges of low hills, form,

St Culshaw M-5 (1932-1943) 1949 AW42 Santal AW42

As the days lengthen and become warmer, other activities find their place in the routine. When the first rain has fallen the men begin to dig up the pits of rotted cow manure beside their homes, carry loads of manure to the fields, and first plough the beds where the seed rice will be sown. At the same period they carry out repairs to their houses, and the walls of new houses begin to rise. Some walls are built by constructing a screen of thin sticks on which a mud plaster is fastened, but most of the walls are built by adding a layer of wet clay to the layers which have previously dried in the sun. Timber for rafters and posts is brought from the forest, and is not always paid for. Bamboos are cut and sliced; they are needed as a foundation for the thatch. Home-made rope is prepared. Rice straw is the material commonly used for roofing.

At this time some men devote their energies to trapping and snaring. A party of men may be formed for digging out a colony of field rats which will supplement the diet. Many varieties of bird traps and snares are in use. Some have insects attached to them as bait, with birdlime to snare the birds. Others are set on the ground to catch partridge with ingenious arrangements of slip-knots and a captive bird in the centre to act as a decoy. Some of the operations call for elaborate preparation. Nets are taken down from under the rafters where they have hung since the previous year. The men seek out pools of water which may be still left in some shady hollow of the forest when most of the water has dried, for there the birds will come to drink. Traps are formed by nets, or by baskets attached by a string to where one of the men sits waiting to pull it and entrap the bird. On an April day in Barikul two parties of men set out on trapping expeditions. One of them went to a distant forest and returned with three peacocks. The other party spent the day near the banks of a nearby stream and gathered three-score birds, including doves, grey partridges, Indian drongos weaver birds and crow pheasants, all of which are eaten by the Santals.

At the same season the women find new employment. One of the commonest of the trees growing in the villages, the fields and the forests is the *mathom* (*Bassia latifolia*, Roxb.); it has thick sepalled succulent flowers during the spring. These flowers fall from the trees during the early hours of the morning, and the women and girls rise early to collect them. They are used in a variety of ways. When dried they provide either a nutritious cattle food or a supplement for human diet. They are used in

St Culshaw M-S (1932-1943) 1949 AW42 Santal AW42

preparing the cakes which the men take with them at the time of the hunt. The flowers have a high sugar content, and their most common use is in the distillation of spirits, the *paṇṛa* or brandy of the Santals. The work of distilling is carried on by one or two families in the village, and they sell not only to their fellow villagers, but they operate illegal liquor shops on market days. *Matkom* beer, a drink which is only slightly fermented, as it is prepared within twenty-four hours, is refreshing, but it is used chiefly for the purpose of counteracting the after-effects of a drinking bout.

The women prepare the rice beer which is brewed in all the homes. First they collect the roots that are used as fermenting agents from the forest. In this, as in most of their gathering activities, the women of the village work together. There is a certain ceremonial attached to the gathering of these roots. Parties sometimes consist of women from more than one village, and so a day for the expedition has to be fixed. The procedure suggests that this is regarded as the women's counterpart to the hunt. Before the wood is entered one of the older women invokes *Gòsàĕ* ("Lord", a general term used in addressing the spirits) and requests that they be led quickly to the places where they will find the desired plants. The first woman to light upon one falls on the ground, pretending to be drunk. These roots are known by the general name of *ṛaṇu ran*, "medicine of medicines". It takes three days for the beer to mature or "cook". It cannot be stored, so it is brewed fresh for festival occasions and also in the majority of houses as often as the family can afford. *Haṇḍi*, or rice beer, occupies an important place in the ritual as well as in the social life of the tribe. It is essential for all libations to the spirits. A myth relates how the secret of brewing beer was imparted to the first human beings by the chief spirit of the Santals himself. It is therefore the indispensable Santal drink. It is extremely difficult for a Santal to understand not only how a person can live without beer, but why he should try to do so. The case of Pitam, who lived near Benachapra, illustrates this. He was a man of great influence because of his powers as a witch-finder. He had, however, abandoned some of his tribal ways, and, influenced by Vaishnava Hinduism, he had given up meat eating and the drinking of intoxicants. During the annual tribal council some of his enemies charged him with undermining Santal society, and one of the counts against him was that by abstaining from beer he was doing harm to the spirits.

CHAPTER 9

FESTIVALS

The two great village festivals take place in the spring and after the harvest. The name of the former, *Baha*, means "Flower festival". It is held after the full moon in the month of *Phalgun* (February-March). The hot season is about to begin, sap is rising in the trees, and the *sarjom* is resplendent with blossom and tender green leaves. Until the festival has taken place the women do not gather the *matkom* blossoms which provide them with both food and drink. It is held on different days in different villages so that the celebrations can be accompanied by a round of visits to relatives. The opening day of all festivals is a day of purification, known as "bathing day". On this day at the time of the Spring festival two temporary sheds are put up in the sacred grove and the young men carry out a hunt in the woods near the village. The priest completes his preparations and bathes certain articles in the waters of the village tank. At sunset three hens are taken to his house by the villagers, who remain there to dance. Three of the young men become spirit-possessed. One impersonates the "Five", another the Old Lady of the Sacred Grove, and the third takes the part of *Maran Buru*; they seize the implements which the priest has purified earlier in the day and make play with them. The priest receives them with respect; he washes their legs and, addressing the spirits, he asks for good fortune during the coming year. When this is over the young men are recalled to their senses by a series of sharp taps on their backs. Dancing is continued throughout the night in the village street just outside the priest's house.

In the early afternoon of the following day the priest is accompanied by the villagers in a singing procession to the sacred grove. On arrival there the same young men are again possessed and run away across the fields, being chased and brought back by the rest of the young men. The priest now assumes an attitude of great humility towards them. He receives them with a cloth tied round his neck in token of the submission of the village to the spirits. The hens are sacrificed and cooked in a hash with rice. The priest and his wife partake of one and the men of the village consume the rest of the food, after which everyone returns home except the priest. He has to remain in the grove until the young men return to escort him. He is then taken to every house in turn and received with great honour. His feet are
